

How to Insert the Locking Clip (Blue, White or Black)

Method 1

Position the clip over the corresponding cavity in the Case.

Hold the Case in both hands with the clip pointing away from you so your thumbs are on top of the cover of the Case and your forefingers are resting along the clip.

Grip the Case firmly & apply even pressure on the clip with your forefingers until the clip snaps into place. The case is now locked.

It is important that both ends of the clip are pushed in at the same time

Method 2

Hold the Case in both hands with the clip (upturned) resting on the counter (or other hard surface). Your palms should be resting on the spine of the Case.

Press the Case down onto the clip till the clip snaps into place. The case is now locked.

How to Remove the Locking Clip (Blue, White or Black)

Please note : The release machine should be fixed to the counter reasonably close to the counter's edge. Some customers prefer to fix the release unit to a vertical surface. (See www.leadingolutions.co.nz for details).

Step 1

Line up the edge of the Case containing the clip with the corresponding cavity of the release machine.

Step 2

Place both palms on the spine of the Case.

Push down firmly on the Case until the release unit is 'fully' de-pressed.

Step 3

Remove the Case from the release unit and then remove the clip from the release unit.

If a clip does not release on the first attempt it is important to push it fully back into the case before trying again.

This 3 step action takes just a second
