

How to Insert the Hub Lock

Step 1

Place the disc in the Case in the usual way, making sure it snaps into place and is securely held by the moulded hub in the centre of the case.

Step 2

Step 3

In preparation ensure that the ridged prongs on the hublock point downwards and the small centre button is in a raised position and points up towards you.

Placing the hublock - Using your thumb and forefinger, press the outside edges of the hub lock downwards until you hear it 'snap' into place.

Note : Do not touch the centre button at this point. It should still be in a raised position.

Step 4

Locking the hublock - using an appropriate tool, push the clear button down through the hub lock as far as it will go. The clear button will sit 4mm inside the hub lock.

Your valuable product is now secure.

Repeat for the second disc if required.

WARNING : It is critical to the performance of the hublock that you ensure the hublock centre button is fully 'depressed'.
