

How to Attach your New D-Shelves to your Existing Stands

Instructions

1. Start laying shelves from Right to Left (when facing existing shelf).
2. When laying shelves, make sure the small lip on the base of the front of the shelf is hanging over (and flush to) the front edge of the existing shelf.
3. The manufacturer has supplied four pairs of Velcro dots per D-Shelf section.
4. Place a 'loop' dot (fluffy) on each of the four corners of the base of each shelf, as in the diagram above.
5. Then join a 'hook' dot (spiky) to each 'loop' dot, so the sticky side is facing away from the shelf.
6. With the Velcro dots attached to the D-Shelf, position this section and fix to your existing shelf, keeping the lip on the base just over the front edge of your shelf.
7. Repeat for each D-Shelf section, making sure to firmly interlock each D-Shelf section together by clicking the interconnecting lugs together (as shown in the diagram above) to lock each section to the next.
